

# Coping With A Cardiac Event: How are you Doing?

Having a cardiac event affects you emotionally as well as physically. Most people feel anxious, depressed, or irritable for several weeks after their cardiac event. If these symptoms make it difficult for you to do your daily activities or you do not seem to be getting better, you should get help. These symptoms may slow your recovery and make it more difficult.

This sheet lists some symptoms of emotional distress that you should watch for as you recover. If you have a number of them, you may find it helpful to talk to a psychologist about your situation. Hospital staff will assist you in completing this form and deciding whether you should meet with a psychologist to help with your recovery.

## Part One Symptoms of Depression

Check (✓) the ones that apply to you.

- I feel:
- |                                        |                                          |                                                                   |
|----------------------------------------|------------------------------------------|-------------------------------------------------------------------|
| <input type="checkbox"/> depressed     | <input type="checkbox"/> very guilty     | <input type="checkbox"/> worthless, useless                       |
| <input type="checkbox"/> very agitated | <input type="checkbox"/> mentally slowed | <input type="checkbox"/> no desire to improve my health           |
| <input type="checkbox"/> punished      | <input type="checkbox"/> hopeless        | <input type="checkbox"/> no interest/pleasure in daily activities |

## Part Two Symptoms of Severe Anxiety

Check (✓) the ones that apply to you.

The following symptoms are often experienced with severe anxiety. Some of them are similar to having a heart attack. If you check off the symptoms with an asterisk (\*), **contact your doctor to make sure they are not part of your heart condition.**

- I often:
- |                                                       |                                                                                   |
|-------------------------------------------------------|-----------------------------------------------------------------------------------|
| <input type="checkbox"/> feel tense                   | <input type="checkbox"/> feel a sense of doom; something awful is going to happen |
| <input type="checkbox"/> worry a lot about things     | <input type="checkbox"/> have a nervous stomach, like "butterflies" are in it     |
| <input type="checkbox"/> get sudden feelings of panic | <input type="checkbox"/> feel faint or dizzy*                                     |
| <input type="checkbox"/> feel restless                | <input type="checkbox"/> find myself shaking or trembling*                        |
| <input type="checkbox"/> get easily startled          | <input type="checkbox"/> sweat a lot or feel clammy*                              |

## Part Three Other Coping Factors

Check (✓) the ones that apply to you.

I have experienced the following:

- I have been treated for anxiety, depression or other emotional problems in the past.
- I am not sure if I will be able to cope with the physical problems and/or lifestyle changes related to my heart condition.
- I do not have any emotional or social supports to help me cope with my heart condition.

**REMINDER:** For inpatient assessment and support contact the Adult Mental Health Liaison Nurses at 204-787-3729 or 204-787-5070

### CRITERIA FOR CLINICAL HEALTH PSYCHOLOGY REFERRAL *Completed by hospital staff*
